Demonstrate how Selenium web driver is installed and integrated in Eclipse.
Ans:
1.   Download selenium web driver from https://www.selenium.dev/

2.   Launch the Eclipse and create a Workspace.
      Click on File - New - Java Project.

3.   Add selenium standalone server jars.
      Right-click on Project -> select Properties -> Select Java Build Path.
      Navigate to the Libraries tab and go to classpath and click on the Add External Jars button.
      Add selenium standalone server Jar files.
      Click on the Apply and Close button.
